

How to Access your Existing Data through KobotoolBox

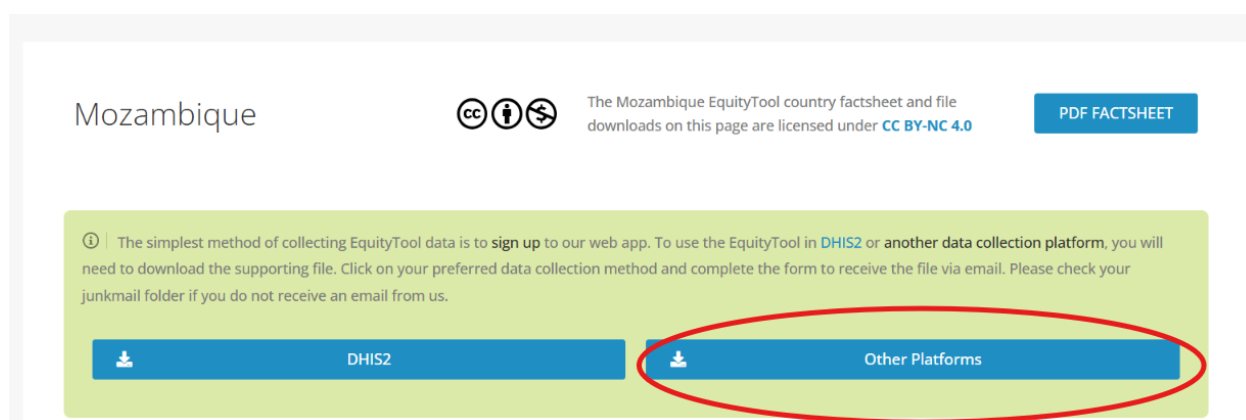

Your EquityTool account is linked to your [KoboToolbox account](#), where your survey data is stored. While the EquityTool platform is unavailable, you can continue working with your data by following these steps:

1. Sign in to your KoboToolbox account using the same account associated with your EquityTool account.
2. Open the project containing your EquityTool survey.

Analyze your data

To calculate EquityTool wealth results outside of the EquityTool web application, download the Excel file available under the Other Platforms section of the EquityTool website for your country.

The questions for each country are different. To download the file, go to the [country list](#), click on your country and then click on the Other Platforms button. You will need to fill in your details and you will be emailed a zip folder containing your Excel file.

This file includes analysis resources and scripts for:

- R
- SPSS
- Stata
- Other platforms

Guidance on how to analyze is described in the file and [summarized in this guide.](#)

Important Instructions for Analysis

When preparing your data for analysis, do not modify the survey questions or response coding.

The questions should be used exactly as provided, and response options must remain coded as follows:

- Option 1 = 1
- Option 2 = 2
- Option 3 = 3 (where applicable)

Changing the wording of questions or the coding of response options may prevent the analysis scripts from producing correct results.

Using the Analysis Scripts

Choose the appropriate worksheet or script based on the software you are using:

- SPSS: Open the SPSS Syntax tab and follow the instructions provided.
- Stata: Open the Stata do-file tab and follow the instructions provided.
- Other statistical software: Open the Other software tab and follow the instructions for importing and analyzing your data.

These scripts have been prepared to work with the original survey structure and coding, so following the instructions carefully will ensure your EquityTool results are generated correctly.

Need Additional Help?

If you experience any issues accessing your KoboToolbox account or running the analysis scripts, please contact the EquityTool support team [here](#).

Thank you for your patience while we work to restore the EquityTool web application.
